

Zecurit Endpoint Manager: Endpoint Management & Security

One agent. One console. Every endpoint, secured and managed across your entire global fleet.

www.zecurit.com

Problem

Fragmented tools create invisible security gaps

Most IT teams are currently stitching together five or more tools to manage their endpoint fleet.

Compliance

Lacks the unified visibility required to prove compliance for ISO 27001 or GDPR.

Remote support

Forces IT admins to switch tabs constantly, leading to critical oversight.

Asset tracking

Lives in a disconnected silo, preventing comprehensive visibility.

Patch management

Remains a primary entry point for ransomware when endpoints are not updated.

One Agent

One company, four products, and single unified agent

The Zecurit suite scales, from standalone support to multi-tenant MSP management.

Endpoint Manager

Our flagship UEM/RMM suite for patching, deploying, and securing every endpoint.

Endpoint Manager MSP

A multi-tenant edition for MSPs managing diverse customer environments.

Asset Manager

Dedicated ITAM for hardware/software inventory, license compliance & lifecycle tracking.

Remote Access

Standalone unattended and on-demand remote support for helpdesk-centric teams.

Bundle

Bundle Advantage: Everything in One License

Zecurit Endpoint Manager isn't a single feature; it's a complete toolkit for the modern IT admin.

-  **Asset Management**
-  **Patch Management**
-  **Remote Access**
-  **Software Deployment**
-  **Config Management**
-  **Device Control**

You can't fix what you can't see

Eliminate shadow IT and license waste with complete visibility into every hardware and software asset.

01

License Compliance

Track entitlements vs. installations to mitigate legal and financial risk.

02

Software Metering

Monitor actual usage patterns to optimize your software spend.

03

Lifecycle Tracking

Keep tabs on warranties and geolocations for better accountability and recovery.

Automate Your First Line of Defense

Scan, detect, and deploy patches across heterogeneous environments before attackers find the gap.

Patch Detection

Zecurit detects missing patches across Windows, macOS, and Linux.

Risk Prioritization

Ranks patches by severity using CVSS-based prioritization.

Update Policies

Define granular update policies with custom windows and reboots.

Centralized Monitoring

Maintains a centralized dashboard for real-time status alerts.

Audit & Compliance

Generates audit-ready reports proving 24/7 environment security.

Configuration Management

Define Once, Enforce Everywhere

Centrally manage policies, device controls, and system settings across your fleet.

Centralized Control

Centralized configuration management allows IT teams to define settings once and apply them consistently across all devices, ensuring uniform compliance and security throughout the organization.

Reusable Policy Baselines

Allows bundling of multiple policies into reusable baselines for uniform application across departments and device groups.

Real-Time Monitoring

Enables real-time monitoring and flexible policy associations to adjust configurations without disruption.

Risk Reduction & Compliance

Ensures devices stay compliant, reduces configuration drift, strengthens security hygiene, and minimizes operational risks.

Device Control

Reduce the attack surface with granular device control

Control every USB device, peripheral, and communication port from a single policy console.

Policy-based rules

Enable allow/block rules by peripheral category, including removable storage, Apple devices, and imaging hardware.

Shadow data pathways

Close unauthorized connections by controlling Wireless, Bluetooth, and infrared ports.

Offline enforcement

Policies remain active even when endpoints are offline, ensuring protection persists beyond the corporate network.

Forensic auditability

Logs every connection attempt with a timestamp, device ID, and user identity for full oversight.

Regulatory Compliance Support

Granular control supports industries with strict governance and helps prevent insider and external threats.

Disk Encryption Management

Bitlocker & File Vault Management

Protect data at rest with automated BitLocker enforcement and secure recovery key backup.

Centralized Encryption

Zecurit centralizes BitLocker enablement and recovery key workflows to simplify device encryption management.

Flexible Authentication

Supports TPM-only, TPM+PIN, enhanced PIN, or passphrase authentication tailored by department or device tier.

Automatic Key Backup

Handles recovery key backup and rotation to ensure access.

Compliance Strategy

Define encryption profiles and verify TPM for hardware planning.

Push Software at Scale

Zero-touch, silent, scheduled — users never feel a thing.

Zero Touch Installation

Execute software deployments without any user intervention, ensuring a seamless experience. This automated approach minimizes disruptions and guarantees timely software updates across all endpoints.

Pre-install Validation

Conduct checks for required disk space and system requirements before installations occur. This proactive step prevents failures and ensures smooth software setup, maintaining system integrity.

Flexible Targeting

Conduct checks for required disk space and system requirements before installations occur. This proactive step prevents failures and ensures smooth software setup, maintaining system integrity.

Real-time Tracking

Monitor deployment status in real-time, providing immediate insights into progress and issues. This transparency allows IT teams to act quickly, ensuring successful software implementations across the organization.

Remote Access

Troubleshoot anywhere with built-in remote access

Resolve issues faster without the need for expensive, standalone third-party support tools.

Unattended & Instant Remote Support

Supports both unattended remote access and Instant ad-hoc remote support session.

User Collaboration

Multi-monitor support and two-way chat keep the end-user informed.

Session Recording

Option to record end-to-end remote session for Audit.

File Transfer

Move logs or patches securely during active sessions.

Remote Power Control

Execute reboots or Wake-on-LAN for offline machines.

Audit Compliance

Every session is logged and requires user confirmation prompts.

Cut Costs, Cut Carbon

Automating power management cycles can significantly reduce operational costs, eliminating unnecessary energy expenses while maintaining productivity across all endpoints in your organization.

Scheduled wake/shutdown

Includes Wake-on-LAN retry logic and user-presence detection

Granular power schemes

Controls for brightness, sleep timers, and disk activity

Intelligent battery protection

Intelligent low-battery data-loss prevention

Uptime and shutdown reporting

Analytics to catch unstable hardware early

One-click remote management

Options for shutdown, wake, restart, or logoff, all logged and auditable

Be audit-ready by default with 100+ built-in reports

Stop manually pulling data; Zecurit maps your security posture directly to global frameworks.

5+

Compliance Frameworks

Pre-built templates mapped to ISO 27001, HIPAA, GDPR, PCI DSS, and the DPDP Act.

100+

Security & Operational Insights

Evidence includes antivirus status, firewall gaps, software metering, and user logon audits.

Custom Reports

Generate flexible reports with advanced criteria, custom columns, and reusable report templates.

Scheduled Reports

Automated delivery of reports in PDF, CSV, or XLS formats ensures ongoing audit readiness without manual effort.

Why Zecurit outperforms legacy point-tool stacks

Feature	Legacy Point-Tool Stack	Zecurit Endpoint Manager
Agent Count	Multiple (3-5 agents)	Single lightweight agent
Console	Disconnected silos	Unified single console
Patching	OS-specific tools	Windows, macOS, and Linux
Cost	High (Multiple subscriptions, add-ons)	Predictable, all-in-one
Support	Fragmented vendors	Direct, responsive support

What our clients say

Zecurit Endpoint Manager has transformed how we manage our infrastructure with complete visibility and centralized control.

Dr Swagata Sarkar
Head of the Department.

Zecurit offered the right features at the right price and no hidden surprises along the way.

Nishanth
CTO, Blunav, Airport Management.

Start your 14-day free trial and secure your fleet

Experience the power of unified management on your own endpoints with
no credit card required.
